

 CO_2 Incubators CO_2 /O₂ Multi-gas Incubators

Optimising cell culture outcomes and reproducibility

PHCbi CO_2 Incubators provide precise control of CO_2^* concentrations and accurate, uniform, and highly responsive temperature control within the chamber. During cell culturing, contamination is prevented by the germicidal interior and optional UV lamp. Time-saving decontamination is realised by H_2O_2 option.

Easier to Clean

The slide-out stainless steel shelves rest securely in integrated shelf channels molded into the left and right sidewalls, eliminating the need for troublesome shelf brackets and clips. Molded shelf channels reduce the amount of interior parts by up to 70%. **Unified Controller**

A central intuitive control panel with graphic user interface simplifies operation and improves visibility of key performance parameters. An OLED input/output display creates an ergonomically-friendly selection of all functions including temperature and CO₂* setpoints and alarm deviation limits for temperature and CO₂*. A USB data port permits downloading logged performance and event information.

Optimal Cell Growth

The inCu-saFe[®] copper-enriched stainless steel alloy creates an internal germicidal barrier against airborne contaminants. Unlike pure copper, the inCu-saFe[®] surface will not discolour or corrode due to CO_2^* exposure over time. An optional UV lamp automatically destroys airborne contaminants through serial dilution of air that gently circulates through a rear plenum. An optional H_2O_2 vapor nebuliser saves time when total incubator decontamination is required.

Event Management

The microprocessor controller manages all incubator functions and user inputs through an arrow prompted menu. Notifications include actual temperature, actual CO_2^* , door status, UV status and deviation alarms. The CO_2 sensor maintains setpoint to within 0.1% and eliminates any need for periodic calibration. With model MCO-50M precision CO_2 and O_2 sensors maintain the set point to within 0.2% or better, and require only minimal calibration.

Precision Gas Sensors IR CO₂ and Zirconia O_2^*

50 L

The IR CO_2 sensor offers continuous calibration for excellent control and accuracy. This ceramic sensor is not affected by moderate temperature and humidity changes and is linked to the P.I.D. controller for fast recovery. As CO_2 and pH levels are key components for proper tissue culture, "Real Time" recovery and monitoring of CO_2 levels provide better culture outcomes. A Zirconia O_2 sensor controls oxygen within a 1-18% / 22-80% range.

Reproducibility by Elimination of External Factors

Reduction of interior parts and condensation control by Peltier powered dew stick helps minimise external factors that often complicate efforts to reproduce cell culture and other protocols. Stable temperature is maintained by the Direct Heat and Air Jacket system. CO_2^* is quickly restored to set-point after door openings, while relative humidity returns to an elevated state to prevent media desiccation.

Life Science Innovator Since 1966

PHC Corporation, Biomedical Division

Time-Saving Decontamination

The high-speed decontamination system uses vaporised hydrogen peroxide and UV light. It cleans the chamber of the incubator safely in less than 3 hours, achieving a minimal 6 log reduction of major contaminants.
